## SOME PUBLIC HEALTH SERVICES IMPROVED OTHERS CRITICIZED

AKTYUBINEK FACILITIES ENLARCHED -- Meditsinskiy Rabotnik, No 21, 25 May 49

The public health network is being expanded in Aktyubinsk Oblast, Yazakh SER. In the past 18 months alone, an ophthalmological hospital with a trachoma department, a tuberculosis dispensary, a hospitul and children's senatorium for suspected cases, and a station for brusellemia cases have been opened.

Phthisiologists are being \*rained. All of them will be supplied with equipment for performing artificial pneumothorax. In 1948, a surgical hospital was established in the mines. A number of other enterprises developed new offices and specialized divisions. Specialists are trained datensively because there is a shortage in the oblast. For example, 15 doctors are taking specialized training in the oblast center, in Alma-Ata, and in Tashkent.

However, it must be noted that our needs are not always taken into consideration. The oblast is not provided with enough medical personnel. Two hundred more physicians are needed on the staff. Fifty-six doctors were required from the graduating classes of Medical Institute in 1948, but only 40 were sent. -- Ye. Chermin, director, Oblast Public Health Department

INSTITUTE AIDS DOCTORS -- Meditsinskiy Rabothik, No 21, 25 May 49

The teaching staff of the Daghestan Medical Institute recently pledged to assist doctors of the area. In 1949, 37 doctors have been given special training in clinics of the Institute: 6 surgnous, 10 therapeutists, 6 uterologists, 10 pediatricians, and 5 dermato-venereologists.

Part of this group is still working in the clinics. Two "brigades" of qualified specialists have already gone out to the mountainous regions of Daghestan. One of the groups is headed by Surgeon Mirsa Magomedov.

Workers of the Chair for the Organization of Public Health are pledged to carry out experimental study and analysis for the united institutions in Makkachkala, Derbent, Buynakak, and three mountain rayons. Work has begun in the Central Clinical Hospital at Makhachkala. -- R. Alikishiyev, Chairman, "Othom," Union of Medical Workers

MALARIA UNCHROKED -- Meditsinskiy Rabotnik, No 21, 25 May 49

Last summer a unit from the Clinic of Tropice! Diseases of the Tashkent Medical Institute made a field trip to Mirrachul Rayon, Tashkent Oblast. In The unit was headed by the director of the clinic, Professor Nadzhmetdinov. The public health leaders of the rayon, which is plagued with malaria, were hopeful that the arrival of such authoritative specialists would result in some constructive work. However, the unit was interested only in its search for a special form of plasmodium. For this purpose, the populations of two villages were examined, and incidentally, the members of the unit questioned a few patients in the rayon hospital and read several lectures to the medical workers and kolkhoz workers.

This year, the number of persons ill with malaria in Mirzachul Rayon is higher than ever before. The kolkhoz workers are carrying out intensive work in exploiting the Golodnaya steppe and several thousand families from the southern regions of the republic have settled in the rayon.

A great opportunity exists for the workers of the Clinic of Tropical Diseases; they are in a position to render enormous service to the kolkhoz workers by directing and leading the fight against malaria. There is not an experienced malariologist in the rayon, and this is a well-known fact in the clinic.

The representatives of the Antiepidemic Administration of the Ministry of Public Health Uzbel SSR, the Tashkent Oblast Public Health Department, and the Oblast Tropical Diseases Station requested Professor Madzimetálnov to have the clinic sid in conducting antimalaria measures in Mirzachul Rayon, but this request was in vain. Then a letter was sent to the Samarand Institute of Malaria and Parasitology, and a unit was sent out with the head of the institute, Professor L. M. Isayev, in charge for practical work in Mirzachul Rayon.

A similar criticism is leveled at the Tuberculoeis Clinic, directed by Professor Gaspar'yan. The need for phthisiologists is unusually great, yet in 1947 and 1948, only 19 doctors finished their specialized training instead of the 30 envisaged by the plan. The pace of the remaining clinics follows that of those mentioned pretty closely, and although excellent resolutions have been adopted, they have not been carried out. -- D. Somichev, Tashkent Correspondent

SEMASHKO DEAL -- Meditsinskij Rabotnik, No 21, 25 May 49

Mikolaya Aleksandrovicha Semashko, one of the first organizers of Soviet public health, an outstanding Party functionary, and a recovered teacher, was buried 20 May 1949 in Mescow. His services were highly valued by the government, and he was swarded the Order of Leriz and the Order of the Ard Banner. During the past few years, he had directed the Institute for the Organization of Public Mealth and the History of Medicine, and headed the Institute of School Hygiene in the Academy of Pedagogical Sciences of the PARSE. One of the organizers of the Soviet medical service in the last war, he taught for 27 years at the First Moscow Medical Institute.
